

Multiple Intermediaries Reduce Farmers Earnings & Increase Consumer Prices

Theme: Agriculture, FoodTech & Rural Development | Problem Statement ID: SIH26033

TEAM REGISTRATION DETAILS

Team Name: Risk Takers

Team ID: 62079

Target Domain: Decentralized Farm-to-Fork Direct Trade, Cold Aggregation & Smart Logistics

FarmConnect

Smart Farm-to-Customer Network

100% Full Working Prototype Built

IDEA / SOLUTION

FarmConnect: Direct multi-stakeholder ecosystem connecting Farmers, Consumers, Transporters & Aggregation Hubs.

End-to-End Operational

Core Sub-Systems

Farmer Portal

- Interactive GPS mapping & standardized ID (FC-TG-MDL-26-000184).
- Lists produce by variety, grade, harvest date, and custom reserve price/kg.

Buyer Marketplace

- **Flexible Partial Buying:** Buy 20kg from a 500kg lot with atomic lock.
- **Privacy Guard:** Exact GPS masked; district-level badges shown to public.

Logistics & Hub Module

- Waypoint dispatch pushes farm pickup stops directly to driver app.
- Rural aggregation hubs bundle small farm lots into consolidated city trucks.

Additional Features

- **Verifiable Digital ID:** Downloadable farmer identity card for formal loans.
- **Direct Price Realization:** Farmer retains 65–75% of consumer spend.
- **Dynamic Cart Locking:** 10-minute hold prevents overselling inventory.
- **3-Way Transparent Rating:** Reviews for Farmer, Quality, and Delivery.
- **Multilingual Support:** Accessible in English, Hindi, and Regional languages.

Unique Value Proposition: Unique Farmer ID + Flexible Lot Purchasing (Zero distress selling) + Automated First-Mile Farm Pickup

100% Working Prototype Built

From soil to salad bowl without the middleman toll.

TECHNICAL APPROACH

Fullstack Modular Architecture with Real-time Geospatial Logistics and Atomic Inventory Controls.

Frontend (Design & User Application)

- **Web App / PWA:** Next.js 16 (App Router), React 19, TypeScript.
- **Styling & Icons:** Tailwind CSS v4, Lucide React icons, responsive UI.
- **Map Component:** Leaflet interactive map for farm geofencing & coordinates.

Backend (Server, APIs & Microservices)

- **Framework:** Python FastAPI with async non-blocking execution.
- **Validation:** Pydantic v2 schemas for strict data contract verification.
- **Security:** Python-JOSE for JWT token authentication and role authorization.

Database, Storage & Routing Layer

- **Data Persistence:** Supabase / PostgreSQL (7 normalized schemas).
- **Atomic Concurrency:** Real-time inventory decrement (`stock -= qty`).
- **Logistics Solver:** Graph-based Vehicle Routing Problem (VRP) pickup engine.

Multi-Tier Execution Architecture & Swimlane

Where distributed locks meet rural farm gates.

FEASIBILITY AND VIABILITY

Systematic Evaluation Across Technical Readiness, Business Viability, Real-World Risks, and Concrete Strategies.

Feasibility	Viability	Challenges & Risks	Strategies
• Zero-Install PWA: Accessible on any basic Android/iOS mobile browser without app stores. • FastAPI Asynchronous I/O: High concurrency handling thousands of simultaneous farmer queries. • PostgreSQL Scalability: Enterprise ACID transactions for error-free order processing. • Open-Source Mapping: Leaflet + OSM avoids costly third-party map licensing fees.	• Modular Architecture: Scalable microservices for Marketplace, Orders, and Transporters. • Self-Sustaining Model: Nominal 2-3% platform fee covers cloud hosting & operations. • Policy Alignment: Directly supports PM Kisan, AgriStack, and Digital India mission goals. • FPO Aggregation: Connects with Farmer Producer Organizations for bulk regional dispatch.	• Rural Connectivity: Slow or spotty 2G/4G coverage in interior agricultural fields. • Digital App Literacy: Reluctance of elderly farmers to navigate complex smartphone forms. • First-Mile Fragmentation: Dispersed small lot collections across remote rural villages. • Concurrency Conflicts: Multiple buyers attempting to buy the same remaining stock.	• Low-Data Caching: Offline registration queue with automatic background sync. • Visual Multilingual UI: Icon-driven workflows, minimal typing, regional language toggle. • Collection Hubs: Rural aggregation depots bundle small loads into full trucks. • Atomic Row Locking: Distributed locking releases unpurchased items after 10 min.

Workflows so intuitive, even non-tech-savvy farmers adopt them in minutes.

IMPACT AND BENEFITS

Empowering Rural Cultivators, Lowering Food Costs for Consumers, and Creating Rural Logistics Employment.

Socio-Economic Impact

- **Eliminating Middlemen:** Cuts 4–6 commission tiers; farmer share jumps from 35% to 70%.
- **Ending Distress Sales:** Partial lot selling allows farmers to sell at peak market rates.
- **Formal Credit Passport:** Verified digital transaction history unlocks bank loans & crop insurance.
- **Rural Youth Jobs:** Organized local transportation creates steady rural driving livelihoods.

Directly achieves UN SDG 1 (No Poverty) & SDG 8 (Decent Work)

Benefits That Matter

Sub-24h Direct Farm Dispatch

Escrow Payouts upon Delivery

GPS Masking for Farm Privacy

Real-time Price Transparency

20% Reduction in Transit Loss

Verified across all 5 Platform Roles

Key Impact Metrics

+35%

Farmer Income

15–20%

Consumer Savings

< 24h

Farm-to-Doorstep

0%

Middleman Markups

Simulated on 500kg harvest lot orders

Finally, proof that transparent agriculture pays everyone better.

RESEARCH AND REFERENCES

Comparative Analysis Against Existing Agricultural Platforms and Literature References.

Evaluation Parameter	Traditional Mandi	e-NAM Portal	Commercial Apps	FarmConnect (SIH26033)
Intermediary Removal	4-6 Middlemen	Registered Traders	Platform Commission	Zero Middlemen (P2P)
Quantity Flexibility	Full Quintals Only	Bulk Auction Lots	Fixed Pre-packs	Custom Partial Lot (20kg)
Farm-Gate Pickup	Farmer Bears Transport	Must Bring to Yard	Limited Hubs	Automated VRP Pickup
Digital Farmer ID	Paper Slips	Mandi-Only ID	App Account	Unique Standard Farmer ID
Location Privacy	Public Yard	Public Board	Generic Info	Masked GPS + District Tag
Payment Settlement	Delayed (15-45 Days)	Mandi Gateways	7-14 Days Batch	Instant Escrow on POD

Research Foundations

- **e-NAM Gaps:** Electronic auction barriers & trader dependencies.
- **Agmarknet:** Daily commodity market wholesale price spreads.
- **FPO Hub Studies:** Cooperative collection logistics models.
- **VRP Routing:** Multi-stop heuristic vehicle routing.
